GRIDZILLA

A grid signal for home batteries, cars and heat pumps.

Mathew Stafurik · Peter Mikeška · Matthew · Tedi

Grid-Serving Storage · Energy Bridge Vienna 2026

Europe's largest battery is in people's basements.

The grid can use none of it.

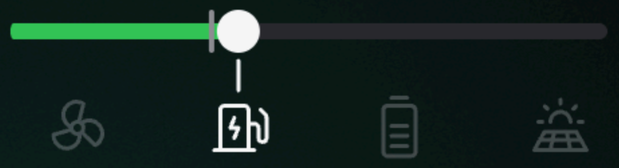

Slovakia

0 signals

from the grid operator
to home batteries

Germany

4.2 kW

the operator may dim
one new charger to this

Ukraine

3 GWh

of home batteries, idle
through the blackouts

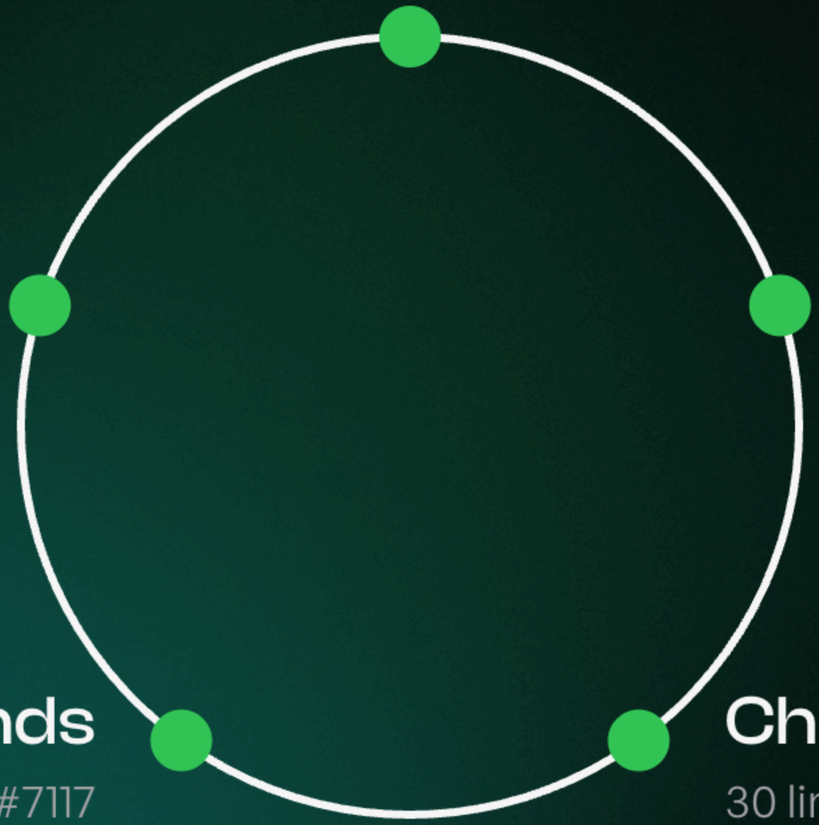

The storage exists. The signal does not.

Battery first. Car second. Hot water third.

The operator asks. The house decides. The owner can always say no.

The loop, every 15 minutes.

Gathers

72 transformers, the weather, the plan, every reply

Thinks

The AI writes the message in 1.5 s

Checks

30 lines of plain rules, not AI

Signs and sends

The platform signs message #7117

Houses reply

271 homes answer, all signed

Six words. Signed.

SUPPORT

Evening peak, or the grid short of power

“Take at most 3 kW from the street.”

ABSORB

Noon sun flooding the street

“Send back at most 2 kW.”

PREPARE

A warning: storm, planned outage, attack

“Be 90 % full by 17:00.”

STRETCH

The street is dark, power back at a known time

“Run on your own, send nothing back, make it last.”

RECOVER

The transformer is replaced

“Refill slowly, not all at once.”

RELEASE

The event is over

“You are on your own again.”

Plus a 24-hour envelope per street, renewed every two hours. Every message Ed25519-signed with a time window, ramps randomised so a street never steps in sync, the owner's limits always win, and everything reverts when the heartbeat stops.

The monster eats peaks.

Every street, every evening.

80%

with Gridzilla, tonight's plan down from 95 % without it

The next 24 hours for Vienna: 2,168 homes, cars and heat pumps, renewed every two hours from the real weather. Live.

Saved tonight

4.3 MW
off the city's evening peak
28.2 MW without the plan, 24.0 MW with it

1.4 MW
kept off the grid right now
29.5 MW without Gridzilla, 28.1 MW with it

20 of 20
streets kept inside their limit
that would pass it tonight without the plan

10,419 kWh
car charging moved into the night
1,184 cars full by morning, 1,674 kWh from home batteries

What we did

0
signals signed today
since 00:00 grid time

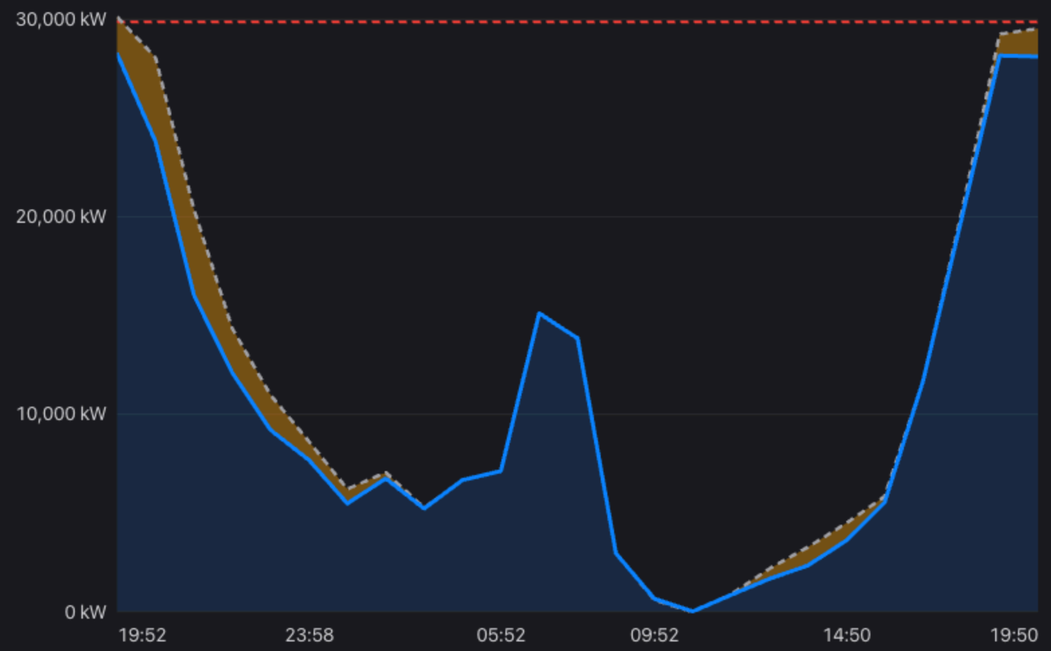

0
houses following a signal now
no refusals today

0
AI decisions today
0 sent, 0 stopped by the guard, diet plan renewed 1x

Vienna · all 72 transformers limit 30 MVA

Nordbahnhof is heading to 135 % of its limit at 19:50. Gridzilla is watching.

VIENNA | Wien Sued | Wien Nord | Wien West | Wien Ost | Kendlerstrasse | Wien Mitte | Bisamberg | Schwarzenbergplatz

Followed
by the battery and heat pump

Real end to end. The planning runs on the fleet.
Paid by the meter: a flat yearly fee, crisis prices only when the meter proves the limit was kept.

A simulated Vienna

Two thousand houses, the same cars with and without Gridzilla, realistic charging.

72 street transformers in a simulated Vienna, live

17 inside the limit · 31 near it · 24 over

−36%
one street
Atzgersdorf, 511 to 325 kW

−5 MW
Vienna
two thousand houses, 31.2 to 26.2 MW

0 kW
a street
where no car charged

Measured on the simulated fleet, 24 Oct 2026, with the heat pumps shedding floor heating as well

It eats peaks for breakfast.
